[题型]问答题

[章节]

[类别]考试

[题干] 6. 已知  $\xi \sim N(8,4)$ , 计算  $P(\xi \le 10), P(\xi > 8)$  (注:,  $\Phi_0(0) = 0.5$ ,  $\Phi_0(1) = 0.8413$ ,  $\Phi_0(2) = 0.97725$ )

[选项]

[答案] 解: 因为
$$\xi \sim N(8,4)$$
,  
知  $E\xi = 8$ , $D\xi = 4$ ,  $\sigma = 2$   
所以,  $\frac{\xi - 8}{2} \sim N(0,1)$   
 $P(\xi \le 10) = P\left(\frac{\xi - 8}{2} \le \frac{10 - 8}{2}\right) = \Phi_0(1) = 0.8413$   
 $P(\xi > 8) = 1 - P(\xi \le 8) = 1 - P\left(\frac{\xi - 8}{2} \le \frac{8 - 8}{2}\right) = 1 - \Phi_0(0) = 0.5$
